Genetic tests rule out claims of 'Anastasia,' scientist says

Compiled from News Services

LONDON — After more than 60 years of mystery, a British government scientist says genetic tests have disproved a woman's claims to be Anastasia, daughter of the last Russian czar. Dr. Peter Gill said the tests showed Anna Anderson was not related to the Russian royal family and therefore could not have been the youngest daughter of Czar Nicholas II, who was killed by the Bolsheviks in 1918. Anderson, the most famous of several women who claimed to be Anastasia, died in the United States in 1984 after saying for more than 60 years that she was the princess. Ingrid Bergman won an Academy Award for her portrayal of Anderson in the 1956 movie *Anastasia*.
